[Rigid Robotics Inc.](#)

📅 Dec 2021—Present

📍 Vancouver, Canada (Remote)

- Performed physical- and signal-based feature extraction and engineering on movement and location data of mining shovels
- Performed clustering on mining shovels' movements data using spectral clustering and VAEs
- Used historical features (e.g., tumbling, lag, and rolling) to improve model accuracy and reduce post-processing overhead
- Designed and developed ensemble classifiers to predict the degree of hardness of shovels' digging operations
- Applied analytical methods for model calibration
- Developed a Python library of utility and project-specific modules required for Rigid Robotics' data applications
- Proposed context-relevant performance metrics to stakeholders and clients
- Developed end-to-end ETL and prediction pipelines for data and machine learning operations (MLOps)
- Wrote unit tests and integration tests for data pipelines
- Managed machine learning life cycle and deployed several data pipelines to Azure cloud
- Developed a multi-environment infrastructure as code (IaC) project based on Pulumi for cloud applications
